PANEL PULSE OSC
84C5B292F01-0

The diagram shows a circuit for a Panel Pulse Oscillator. It includes a transformer with a primary winding connected to a 250V AC source and a secondary winding connected to a 0.635V source. The secondary winding is connected to a network of resistors (R5352, R5351, R5353, R5354) and capacitors (C6352, C6351, C6353, C6354). A diode (D6352) is connected in series with the secondary winding. A variable capacitor (V6351) is connected in parallel with the secondary winding. The output of the circuit is connected to a 0.635V source.
